

The identification unit of the integrated on-board system MIREL RM2

Type **RM2ID**

illustration picture

RM2ID identification unit is the periphery of the integrated on-board system MIREL RM2 intended for the counter of the track vehicle station. Device for communication with basic unit uses serial bus RS485.

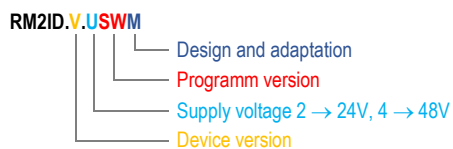

Identification unit allows an operator to enter the identification information, operating parameters and allow the choice of modes of the integrated on-board system. Furthermore, it allows to monitor data provided by the central unit of integrated on-board system.

As user interface is used numeric keypad and two-line vacuum fluorescent display.

Fixing components are delivered with a product.
