

Dispatching of MIREL Systems

DSM Type

Illustrative picture

MIREL DSM software is a web application, which serves for purposes of central control workplaces to monitor operation of DRVs featuring installed functional property of GSM data transfer. Access to the application takes place via web browser on PC, notebook, tablet, mobile phone, or eventually on another device with a standard internet browser supporting javascript. The application is completely stored at web suite of the HMM Company and represents a group of selected data from DRV technology, which are store in central database on server of the HMM Company in real time by means of GSM technology. Data are presented in form of a summary Table, as well as in a graphic form on map background.

Detailed configuration of MIREL DSM software is implemented based on a customer-provided DRV list, as well as list of system users who will work with the system.

Services:

Designation	Service Description
DSM.1.D01	Creation of a DRV group
DSM.1.D02	DRV assignment into a group
