

Service Activities for MIREL VZT Systems Test Unit

Type **SESVZT**

Illustrative picture

Service activities comprising inspection and calibration of MIREL VZT Test Unit. Regular maintenance and calibration of test device for central units forms an important part of proper inspection and diagnostics of MIREL systems. Regular execution of prophylactic inspection on MIREL VZT ensures a correct interpretation of simulated conditions and incentives with which MIREL systems operate and evaluate. By means of calibration concerning MIREL VZT Test Unit output quantities, a correct interpretation of physical quantities from rail line infrastructure as well as simulation ability of marginal conditions is ensured.

Services

-

Currently Prepared Services

Service Code	Description
SESVZT.D4.0	Prophylactic Inspection
SESVZT.KAL.0	Calibration of MIREL VZT test unit and KSV simulated code transmitter

Services without Recommendation

-

Specifications

No.	Version	Title
2338VZT	200626	VZT.4 Catalogue Sheet
2337VZT	200626	VZT.4 Operation and Maintenance Manual
1896VZT	190304	VZT.3 Catalogue Sheet
679VZT	190523	VZT.3 Operation and Maintenance Manual

Use

MIREL VZT – test unit of MIREL systems
